Manual Testing Scenario

1. Calculate turnover data for an account with incremental dates to see if they are calculated correctly or not by system.
2. Calculate turnover data by using 'Date from' and 'Date to' search parameters to see if calculated turnover data for that specified date period is correct or not.
3. Checked if the search parameters (account id, date) fields, search button works properly or not.
4. Checked the fetched data after entering the search parameters to see if system is showing the data that user wants to see.
5. Calculate turnover data to see after entering a previous date operation an account's recalculated turnover data by system is correct or not.
